

1. What is the javax equivalent of Springs @Autowired and @Qualifier annotations?

javax.inject.Inject and javax.inject.Named

**Feedback**

@Inject and @Named

2. What is the @PostConstruct annotation used for?

@PostConstruct initializes beans after dependency injection.

**Feedback**

Initialization through programmatic logic once Constructor and Setter Injection has completed, essentially like java's instance initializer but managed by Spring

3. What annotation would you use for simple value injection?

@Value is used for simple value injection.

**Feedback**

@Value
